

Your partner for universal, scalable, and flexible production insights in one easy-to-use platform

Guidewheel's intelligent FactoryOps platform uses non-invasive sensors to monitor the electrical heartbeat of every machine. Simply clamp a sensor on the main power cord of any machine to transmit amperage data to the cloud and instantly gain real-time visibility into runtime, OEE, energy intensity, and more.

FITBIT™ FOR FACTORIES

Instantly read the machine's electrical "heartbeat"

Downtime

Accurately track downtime and root causes to improve utilization.

OEE

Monitor OEE in real-time and see trends over time.

Production

Forecast throughput and accurately track planned vs actual production.

Cycles

Accurately track cycles, cycle time, and performance against targets.

Energy

Track energy consumption across all of your machines and related costs.

Condition Monitoring

Monitor conditions like temperature, flow, humidity, and pressure.

Guidewheel helps manufacturing leaders make their operations more efficient:

Keep a pulse on every machine

Real-time visibility and predictive alerting help reduce response time, eliminate bottlenecks, and drive peak performance.

Increase production from existing assets

Increase throughput and OEE, ensure on-time delivery, and report on performance to become more capital efficient.

Unlock team productivity

Arm your teams with proactive insights to improve on-the-floor decision making and support your lean operations.

Reduce energy consumption

Minimize idle time, make progress towards energy efficiency goals, and quantify carbon emissions per machine.

The Guidewheel Advantage

Instant impact

Fast time to value with easy, quick setup that delivers insights right away.

Future-proofed investment

Built to grow with you and easily scale across teams, machines, and sites.

Customer-centric support

Dedicated customer support, hands-on training resources, and direct communication with our team.

Smarter operations

AI-powered algorithms get more powerful and predictive over time to drive continuous improvement and streamline workflows.

Guidewheel has been the missing link to get back lost production hours from our equipment. So much so that we've rapidly implemented it across our entire enterprise and made it a cornerstone of our operating philosophy.
